

## **Datatool Duo/Uno Immobiliser Systems**

### **Programming New Dallas Touch Keys**

**Note - It is not possible to program a new touch key without already having a working touch key**

1. Disarm the system by briefly pressing a working touch key to the receptacle (The LED will light green)
2. Within 5 seconds, briefly press the new touch key to the receptacle (The number of tones you hear indicates the number of keys programmed into the unit). This touch key is now programmed!
